Dişli Kaplinler GC

Gear Couplings GC

POWER TRANSMISSION

DİŞLİ KAPLIN GC

DESCH dişli kaplinleri GC, pozitif tork iletimi için uygun esnek mafsalsal bağlantılardır. Radyal, aksel ve açısız şaft hatalarını telafi etmeyi sağlarlar. Dişli kutusu, gres yağlama ve O-ring conta ile çelikten yapılmıştır.

DESCH dişli kaplinleri GC, mekanik mühendisliğin tüm alanlarında kullanılmaktadır ve taçlı spline'in optimum gres yağlamasından kaynaklanan maksimum güvenilirliğe sahip uzun bir servis ömrü sunmaktadır. Kaplinler genellikle yatay montaj için uygundur. Dikey montaj için özel tipler de uygundur.

Tip GC

- Standart kuplaj
- Kısa teslimat sürelerinde özel tipler mümkündür

Özellikler:

- çok yüksek güç iletim hızları ve aynı anda kompakt tasarım
- 8.000.000 Nm'ye kadar tork iletimi
- mil çapları 20 ila 1.000 mm arasında

Diş prensibi

Taçlanmış spline prensibi açısız ve radyal yanlış hizalama durumunda eğri kenar basıncının önlenmesiyle sonuçlanır.

Kademesiz gres yağlamaya bağlı olarak neredeyse aşınmasız bir işleme spline'in optimum sürtünme koşulları, kavramanın uzun ömür beklentisine neden olur.

DESCH Gear Couplings GC

Gear Couplings GC

DESCH gear couplings GC are flexible shaft connections suitable for a positive torque transmission. They ensure to compensate radial, axial and angular shaft misalignments. The gear coupling is made of steel with grease lubrication and O-ring seal.

DESCH gear couplings GC are used in all areas of mechanical engineering and offers a long service life with maximum reliability, resulting from the optimal grease lubrication of the crowned spline. The couplings are generally suitable for a horizontal assembly. Special types are suitable for vertical assembly, too.

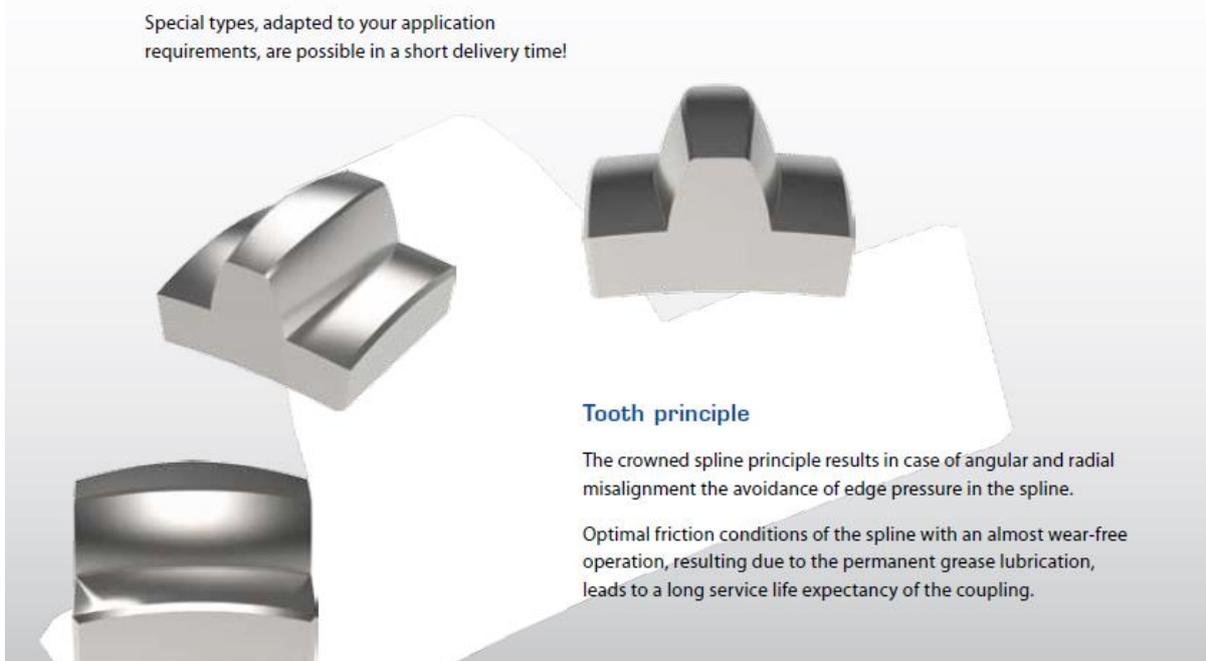

The range of gear couplings includes sizes from 50 to 1000 with torque transmissions from 1.920 Nm to 8.000.000 Nm, these are suitable for shaft diameters from 20 mm to 1.000 mm.

Special types, adapted to your application requirements, are possible in a short delivery time!

Type GC

- > Standard coupling
- > Special types are possible in short delivery times

Tooth principle

The crowned spline principle results in case of angular and radial misalignment the avoidance of edge pressure in the spline.

Optimal friction conditions of the spline with an almost wear-free operation, resulting due to the permanent grease lubrication, leads to a long service life expectancy of the coupling.

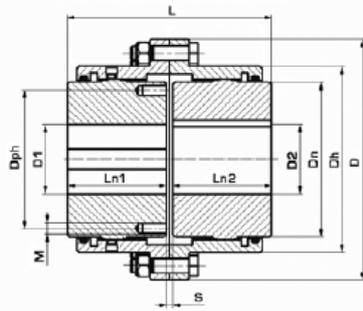

DESCH Gear Couplings GC - Types

	<p>GC - Standard coupling - Small Sizes GC 50 - GC 220</p>		<p>GCL - with extended hubs</p>
	<p>GC - Standard coupling - Large Sizes GC 240 - GC 600</p>		<p>GCT - with shear pins</p>
	<p>GCY - with one-piece sleeve</p>		<p>GCB with brake disc</p>
	<p>GCLE - with intermediate shaft</p>		<p>GCV - for vertical drives</p>
	<p>GCX - with spacer sleeve</p>		<p>GCTAM - Special type for winder</p>

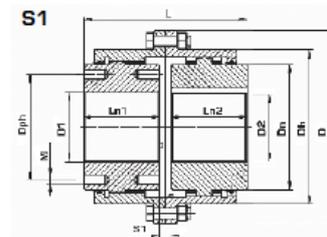

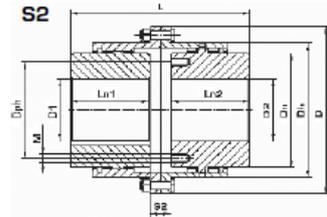

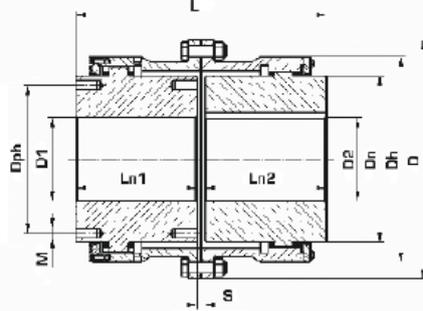

Further types available on request!

- 1) Weight and moments of inertia apply for max. bore diameter.
- 2) The values mentioned are valid for n max. = 1500 rpm

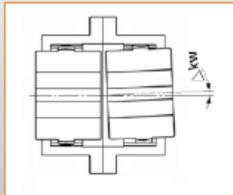

Radial misalignment is given at the maximum allowed angular misalignment and according to the short test value S, S1, S2 - table page 4.

Radial misalignment

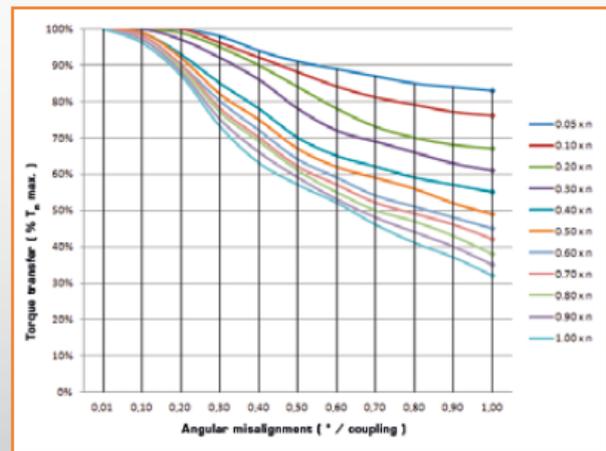

Axial misalignment

Angular misalignment

The size of a coupling for a specific drive depends not only on the driving power and the rotational speed, also on the angular misalignment and the type of machine to be connected.

Torque transfer of the coupling in relation to increasing angular misalignment and rotational speed.
